

The Remote Minijib is a small, compact and lightweight remote-controllable jibarm made for one-man operation. Remotehead and boomarm may be controlled from a distance. The new system developed by PMT suits perfectly for small sets, for example on stage for concerts, classic music or show, or for sports events such as soccer, where the remote Minijib can be placed unobtrusively behind the goal. Depending on the requirements of the location, the system is available with a 1 and a 2 meter arm.

REMOTE MINIJIB

COPACT, REMOTE-CONTROLLABLE JIBARM WITH ONE-MAN OPERATION
