

ViewCam offers a convenient and unobtrusive alternative on outdoor locations, whenever an instantly producible high camera position is requested.

Der hydraulically extendible boom is moved to its final position and provides an impressive lens height of 21 meters with a payload of up to 150 kg. As suitable remotehead we recommend for example the Nettmann MiniMote.

As one-man system ViewCam is an affordable and versatile alternative to risers or lifting-ramps. No matter if small stadiums, winter sports or horse riding, ViewCam is installed quickly and it is very mobile on site due to its practical trailer with tow-coupling.

# VIEWCAM
